

Test of Impact Monitoring training

Name:

Date:

1. Which 2 key headings are prevalent when you want to measure impact / conduct impact monitoring?
2. Which 2 methods do we use when we want to collect data?
3. Why do we use more than one source of information to collect data from?
4. Do you remember what this approach / method is called?
5. We use 2 different types of questionnaires when we implement impact monitoring – do you remember what they are called?
6. We use (if necessary) 3 types of meetings when conducting impact monitoring – do you remember what they are called?
7. What is qualitative data?
8. What is quantitative data?
9. Which 5 categories (assets) are covered under livelihoods?
10. Why is it important to look at livelihoods?
11. Which extra category has DDG added on top of the 5 livelihoods assets?
12. What is important to look at (beside contamination) when we want to select an area to work in?

13. Should we only interview men for the studies?
14. How do we ensure both female and male respondents to the interviews / questionnaires?
15. Are you allowed to interview senile, drunks and/ or people under the age of 15 when using questionnaires in households?
16. If people do not want to participate in filling out the questionnaire – what do we do?
17. Who will conduct the meetings in the village?
18. Who will conduct the implementation of questionnaires?
19. Where does the ID numbering of the questionnaires take place?
20. Do you remember what sampling is?
21. The information we get from both the Baseline Study and later the impact assessment – what can we use it for?
